Matrix Operations

4.1

GOAL 1 USING MATRIX OPERATIONS

A matrix is a rectangular arrangement of numbers in rows and columns. For instance, matrix $A$ below has two rows and three columns. The dimensions of this matrix are $2 \times 3$ (read “2 by 3”). The numbers in a matrix are its entries. In matrix $A$, the entry in the second row and third column is 5.

$$A = \begin{bmatrix} 6 & 2 & -1 \\ -2 & 0 & 5 \end{bmatrix}$$

$2$ rows

$3$ columns

Some matrices (the plural of matrix) have special names because of their dimensions or entries.

<table>
<thead>
<tr>
<th>NAME</th>
<th>DESCRIPTION</th>
<th>EXAMPLE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Row matrix</td>
<td>A matrix with only 1 row</td>
<td>$\begin{bmatrix} 3 &amp; -2 &amp; 0 \ 4 &amp; 3 &amp; 4 \end{bmatrix}$</td>
</tr>
<tr>
<td>Column matrix</td>
<td>A matrix with only 1 column</td>
<td>$\begin{bmatrix} 1 \ 3 \end{bmatrix}$</td>
</tr>
<tr>
<td>Square matrix</td>
<td>A matrix with the same number of rows and columns</td>
<td>$\begin{bmatrix} 4 &amp; -1 &amp; 5 \ 2 &amp; 0 &amp; 1 \ 1 &amp; -3 &amp; 6 \end{bmatrix}$</td>
</tr>
<tr>
<td>Zero matrix</td>
<td>A matrix whose entries are all zeros</td>
<td>$\begin{bmatrix} 0 &amp; 0 \ 0 &amp; 0 \ 0 &amp; 0 \end{bmatrix}$</td>
</tr>
</tbody>
</table>

Two matrices are equal if their dimensions are the same and the entries in corresponding positions are equal.

EXAMPLE 1 Comparing Matrices

a. The following matrices are equal because corresponding entries are equal.

$$\begin{bmatrix} 5 & 0 \\ -4 & 3 \\ 4 \end{bmatrix} = \begin{bmatrix} 5 & 0 \\ -1 & 0.75 \end{bmatrix}$$

b. The following matrices are not equal because corresponding entries in the second row are not equal.

$$\begin{bmatrix} -2 & 6 \\ 0 & -3 \end{bmatrix} \neq \begin{bmatrix} -2 & 6 \\ 3 & 0 \end{bmatrix}$$

To add or subtract matrices, you simply add or subtract corresponding entries. You can add or subtract matrices only if they have the same dimensions.
**Adding and Subtracting Matrices**

Perform the indicated operation, if possible.

a. \[
\begin{bmatrix}
3 \\
-4 \\
7
\end{bmatrix} + \begin{bmatrix}
1 \\
0 \\
3
\end{bmatrix}
\]

b. \[
\begin{bmatrix}
8 & 3 \\
4 & 0
\end{bmatrix} - \begin{bmatrix}
2 & -7 \\
6 & -1
\end{bmatrix}
\]

c. \[
\begin{bmatrix}
2 & 0 \\
3 & 4
\end{bmatrix} + \begin{bmatrix}
1 \\
5
\end{bmatrix}
\]

**SOLUTION**

a. Since the matrices have the same dimensions, you can add them.

\[
\begin{bmatrix}
3 \\
-4 \\
7
\end{bmatrix} + \begin{bmatrix}
1 \\
0 \\
3
\end{bmatrix} = \begin{bmatrix}
3 + 1 \\
-4 + 0 \\
7 + 3
\end{bmatrix} = \begin{bmatrix}
4 \\
-4 \\
10
\end{bmatrix}
\]

b. Since the matrices have the same dimensions, you can subtract them.

\[
\begin{bmatrix}
8 & 3 \\
4 & 0
\end{bmatrix} - \begin{bmatrix}
2 & -7 \\
6 & -1
\end{bmatrix} = \begin{bmatrix}
8 - 2 & 3 - (-7) \\
4 - 6 & 0 - (-1)
\end{bmatrix} = \begin{bmatrix}
6 & 10 \\
-2 & 1
\end{bmatrix}
\]

c. Since the dimensions of \[
\begin{bmatrix}
2 & 0 \\
3 & 4
\end{bmatrix}
\] are 2 x 2 and the dimensions of \[
\begin{bmatrix}
1 \\
5
\end{bmatrix}
\] are 2 x 1, you cannot add the matrices.

In matrix algebra, a real number is often called a **scalar**. To multiply a matrix by a scalar, you multiply each entry in the matrix by the scalar. This process is called **scalar multiplication**.

**Multiplying a Matrix by a Scalar**

Perform the indicated operation(s), if possible.

a. \[
3 \begin{bmatrix}
-2 & 0 \\
4 & -7
\end{bmatrix}
\]

b. \[
-2 \begin{bmatrix}
1 & -2 \\
0 & 3 \\
-4 & 5
\end{bmatrix} + \begin{bmatrix}
-4 & 5 \\
6 & -8
\end{bmatrix}
\]

**SOLUTION**

a. \[
3 \begin{bmatrix}
-2 & 0 \\
4 & -7
\end{bmatrix} = \begin{bmatrix}
3(-2) & 3(0) \\
3(4) & 3(-7)
\end{bmatrix} = \begin{bmatrix}
-6 & 0 \\
12 & -21
\end{bmatrix}
\]

b. \[
-2 \begin{bmatrix}
1 & -2 \\
0 & 3 \\
-4 & 5
\end{bmatrix} + \begin{bmatrix}
-4 & 5 \\
6 & -8 \\
-2 & 6
\end{bmatrix} = \begin{bmatrix}
-2(1) & -2(-2) \\
-2(0) & -2(3) \\
-2(-4) & -2(5)
\end{bmatrix} + \begin{bmatrix}
-4 & 5 \\
6 & -8 \\
-2 & 6
\end{bmatrix}
\]

\[
= \begin{bmatrix}
-2 & 4 \\
0 & -6 \\
8 & -10
\end{bmatrix} + \begin{bmatrix}
-4 & 5 \\
6 & -8 \\
-2 & 6
\end{bmatrix}
\]

\[
= \begin{bmatrix}
-6 & 9 \\
6 & -14 \\
6 & -4
\end{bmatrix}
\]
You can use what you know about matrix operations and matrix equality to solve a matrix equation.

**EXAMPLE 4**  
**Solving a Matrix Equation**

Solve the matrix equation for $x$ and $y$:  
\[ 2\left(\begin{bmatrix} 3x & -1 \\ 8 & 5 \end{bmatrix} + \begin{bmatrix} 4 & 1 \\ -2 & -y \end{bmatrix}\right) = \begin{bmatrix} 26 & 0 \\ 12 & 8 \end{bmatrix} \]

**SOLUTION**

*Simplify* the left side of the equation.

\[
2\left(\begin{bmatrix} 3x + 4 & -1 + 0 \\ 6 & 5 - y \end{bmatrix}\right) = \begin{bmatrix} 26 & 0 \\ 12 & 8 \end{bmatrix}
\]

\[
\begin{bmatrix} 6x + 8 & 0 \\ 12 & 10 - 2y \end{bmatrix} = \begin{bmatrix} 26 & 0 \\ 12 & 8 \end{bmatrix}
\]

*Equate* corresponding entries and solve the two resulting equations.

\[
6x + 8 = 26 \\
10 - 2y = 8
\]

\[
x = 3 \\
y = 1
\]

In Example 4, you could have distributed the scalar 2 to each matrix inside the parentheses before adding the matrices.

\[
2\left(\begin{bmatrix} 3x & -1 \\ 8 & 5 \end{bmatrix} + \begin{bmatrix} 4 & 1 \\ -2 & -y \end{bmatrix}\right) = \begin{bmatrix} 26 & 0 \\ 12 & 8 \end{bmatrix}
\]

This illustrates one of several properties of matrix operations stated below.

**PROPERTIES OF MATRIX OPERATIONS**

Let $A$, $B$, and $C$ be matrices with the same dimensions and let $c$ be a scalar.

When adding matrices, you can regroup them and change their order without affecting the result.

**ASSOCIATIVE PROPERTY OF ADDITION**  
$(A + B) + C = A + (B + C)$

**COMMUTATIVE PROPERTY OF ADDITION**  
$A + B = B + A$

Multiplication of a sum or difference of matrices by a scalar obeys the distributive property.

**DISTRIBUTIVE PROPERTY OF ADDITION**  
$c(A + B) = cA + cB$

**DISTRIBUTIVE PROPERTY OF SUBTRACTION**  
$c(A - B) = cA - cB$
**GOAL 2 USING MATRICES IN REAL LIFE**

**EXAMPLE 5 Using Matrices to Organize Data**

Use matrices to organize the following information about health care plans.

This Year: For individuals, Comprehensive, HMO Standard, and HMO Plus cost $694.32, $451.80, and $489.48, respectively. For families, the Comprehensive, HMO Standard, and HMO Plus plans cost $1725.36, $1187.76, and $1248.12.

Next Year: For individuals, Comprehensive, HMO Standard, and HMO Plus will cost $683.91, $463.10, and $499.27, respectively. For families, the Comprehensive, HMO Standard, and HMO Plus plans will cost $1699.48, $1217.45, and $1273.08.

**SOLUTION**

One way to organize the data is to use $3 \times 2$ matrices, as shown.

\[
\begin{array}{c|c|c}
\text{Comprehensive} & \text{HMO Standard} & \text{HMO Plus} \\
\hline
\text{This Year (A)} & \text{Next Year (B)} \\
\hline
\text{Individual} & \$694.32 & \$683.91 \\
\text{Family} & \$1725.36 & \$1699.48 \\
\end{array}
\begin{array}{c|c|c}
\text{Individual} & \$451.80 & \$463.10 \\
\text{Family} & \$1187.76 & \$1217.45 \\
\end{array}
\begin{array}{c|c|c}
\text{Individual} & \$489.48 & \$499.27 \\
\text{Family} & \$1248.12 & \$1273.08 \\
\end{array}
\]

You can also organize the data using $2 \times 3$ matrices where the row labels are levels of coverage (individual and family) and the column labels are the types of plans (Comprehensive, HMO Standard, and HMO Plus).

**EXAMPLE 6 Using Matrix Operations**

**HEALTH CARE** A company offers the health care plans in Example 5 to its employees. The employees receive monthly paychecks from which health care payments are deducted. Use the matrices in Example 5 to write a matrix that shows the monthly changes in health care payments from this year to next year.

**SOLUTION**

Begin by subtracting matrix $A$ from matrix $B$ to determine the yearly changes in health care payments. Then multiply the result by $\frac{1}{12}$ and round answers to the nearest cent to find the monthly changes.

\[
\frac{1}{12}(B - A) = \frac{1}{12}\begin{bmatrix} 683.91 & 1699.48 \\ 463.10 & 1217.45 \\ 499.27 & 1248.12 \end{bmatrix} - \begin{bmatrix} 694.32 & 1725.36 \\ 451.80 & 1187.76 \\ 489.48 & 1248.12 \end{bmatrix}
\]

\[
= \frac{1}{12}\begin{bmatrix} -10.41 & -25.88 \\ 11.30 & 29.69 \\ 9.79 & 24.96 \end{bmatrix}
\]

\[
\approx \begin{bmatrix} -\$2.16 \\ \$2.47 \\ \$2.08 \end{bmatrix}
\]

The monthly deductions for the Comprehensive plan will decrease, but the monthly deductions for the other two plans will increase.
**GU(39)DED PRACTICE**

**Vocabulary Check ✓**
1. What is a matrix? Describe and give an example of a row matrix, a column matrix, and a square matrix.

**Concept Check ✓**
2. Are the two matrices equal? Explain.

\[
\begin{bmatrix}
-6 & 1/2 \\
4 & 5 \\
3 & 5 \\
\end{bmatrix}
\]

3. To add or subtract two matrices, what must be true?

4. Use the matrices at the right to find \(2(A + B)\). Is your answer the same as that for part (b) of Example 3? Explain.

\[
A = \begin{bmatrix}
1 & -2 \\
0 & 3 \\
-4 & 5 \\
\end{bmatrix}, \quad B = \begin{bmatrix}
-4 & 5 \\
6 & -8 \\
-2 & 6 \\
\end{bmatrix}
\]

5. Rework Example 5 by organizing the data using 2 \(\times\) 3 matrices. Perform the indicated operation(s), if possible.

**Skill Check ✓**

Perform the indicated operation(s), if possible.

6. \[
\begin{bmatrix}
20 \\
-22 \\
9 \\
\end{bmatrix}
- \begin{bmatrix}
-11 \\
-10 \\
-6 \\
\end{bmatrix}
\]

7. \[
\begin{bmatrix}
-6 & -7 & 4 \\
-4 & 0 & -1 \\
9 & 12 & -9 \\
\end{bmatrix}
+ \begin{bmatrix}
-1 & -5 & 8 \\
9 & 12 & -9 \\
\end{bmatrix}
\]

8. \[
\begin{bmatrix}
-4 \\
2 \\
-4 \\
\end{bmatrix}
\]

9. \[
\begin{bmatrix}
-5 & -1 & -5 \\
2 & 0 & 4 \\
\end{bmatrix}
\]

10. **HEALTH CARE** In Example 5, suppose the annual health care costs given in matrix \(B\) increase by 4% the following year. Write a matrix that shows the new monthly payment.

**PRACTICE AND APPLICATIONS**

**Comparing Matrices** Tell whether the matrices are equal or not equal.

11. \[
\begin{bmatrix}
5 \\
-1 \\
7 \\
\end{bmatrix}, \begin{bmatrix}
5 \\
-1 \\
7 \\
\end{bmatrix}
\]

12. \[
\begin{bmatrix}
1 & 0 & -8 \\
8 & 0 & 1 \\
8 & 0 & 1 \\
\end{bmatrix}, \begin{bmatrix}
1 & 0 & -8 \\
8 & 0 & 1 \\
8 & 0 & 1 \\
\end{bmatrix}
\]

13. \[
\begin{bmatrix}
4 & 0 \\
2 & -4 \\
\end{bmatrix}, \begin{bmatrix}
4 & 0 \\
-2 & -4 \\
\end{bmatrix}
\]

14. \[
\begin{bmatrix}
2 & 1.5 & 4.25 \\
0.5 & -0.5 & 0 \\
\end{bmatrix}, \begin{bmatrix}
2 & 3 & 17/4 \\
1/2 & -1/2 & 0 \\
\end{bmatrix}
\]

**Adding and Subtracting Matrices** Perform the indicated operation, if possible. If not possible, state the reason.

15. \[
\begin{bmatrix}
1 & -4 \\
-7 & 2 \\
\end{bmatrix} + \begin{bmatrix}
3 & 5 \\
-5 & 2 \\
\end{bmatrix}
\]

16. \[
\begin{bmatrix}
4 & -2 \\
0 & -6 \\
\end{bmatrix} + \begin{bmatrix}
4 \\
-1 \\
\end{bmatrix}
\]

17. \[
\begin{bmatrix}
-8 & -2 \\
6 & 6 \\
\end{bmatrix} - \begin{bmatrix}
-4 & 5 \\
1 & -1 \\
\end{bmatrix}
\]

18. \[
\begin{bmatrix}
-3 & 5 \\
0 & -1 \\
\end{bmatrix} + \begin{bmatrix}
2 & -7 \\
-4 & 9 \\
\end{bmatrix}
\]

19. \[
\begin{bmatrix}
1.2 & 3.5 \\
0.2 & 5.1 \\
\end{bmatrix} + \begin{bmatrix}
4.1 & 8.7 \\
2.6 & 5.3 \\
\end{bmatrix}
\]

20. \[
\begin{bmatrix}
7 & -1 & 4 \\
11 & -9 & 2 \\
\end{bmatrix} + \begin{bmatrix}
-3 & 6 & 3 \\
10 & 1 & -5 \\
\end{bmatrix}
\]

21. \[
\begin{bmatrix}
1 & 6 \\
-1 & -6 \\
2 & 8 \\
\end{bmatrix} - \begin{bmatrix}
7 & -3 & 9 \\
-2 & -7 & 9 \\
11 & -1 & 2 \\
\end{bmatrix}
\]

22. \[
\begin{bmatrix}
1/2 & 1/4 \\
3/8 & 1/2 \\
\end{bmatrix} - \begin{bmatrix}
2 & 3/4 \\
5 \\
\end{bmatrix}
\]

**Guided Practice**

2 & 3/4 \\
5 \\
\end{bmatrix}
\]
MULTIPLYING BY A SCALAR  Perform the indicated operation.

23. \(-4 \begin{bmatrix} -1 & -3 & 7 \\ 0 & 4 & 0 \\ -2 & 0 & 1 \end{bmatrix}\)
24. \(5 \begin{bmatrix} -2 & -6 \\ 3 & 1 \\ -3 & 5 \end{bmatrix}\)
25. \(4 \begin{bmatrix} 1 & 3 & 9 \\ -5 & 5 & 15 \\ -3 & -5 & -11 \end{bmatrix}\)
26. \(-9 \begin{bmatrix} 2 & 0 \\ -2 & 2 \\ 1 & 4 \end{bmatrix}\)
27. \(\frac{1}{2} \begin{bmatrix} -2 & -2 \\ 4 & 11 \\ 6 & -10 \end{bmatrix}\)
28. \(2.5 \begin{bmatrix} -8.6 & 3.4 \\ 1.2 & -5.1 \\ -4.8 & 4.4 \end{bmatrix}\)

COMBINING MATRIX OPERATIONS  Perform the indicated operations.

29. \( \begin{bmatrix} 12 & -8 \\ 0 & 3 \end{bmatrix} + 4 \begin{bmatrix} 1 & 0 \\ 3 & -2 \end{bmatrix}\)
30. \(2 \begin{bmatrix} -6 & -10 & 2 \\ 4 & -7 & -4 \end{bmatrix} - \begin{bmatrix} -1 & 5 & 13 \\ -3 & -6 & 19 \end{bmatrix}\)
31. \(2 \begin{bmatrix} 7 & -7 \\ -1 & 3 \end{bmatrix} + 4 \begin{bmatrix} 2 & -4 \\ -5 & -6 \end{bmatrix}\)
32. \(3 \begin{bmatrix} -7 & 1 & 0 \\ 8 & -6 & -2 \end{bmatrix} - 2 \begin{bmatrix} 4 & -1 & -7 \\ -3 & -5 & 5 \end{bmatrix}\)

SOLVING MATRIX EQUATIONS  Solve the matrix equation for \(x\) and \(y\).

33. \(\begin{bmatrix} -2x & -8 \\ -10 & -9 \end{bmatrix} = \begin{bmatrix} 6 & y \\ -10 & -9 \end{bmatrix}\)
34. \(\begin{bmatrix} 3x & -2 \\ -1 & 8 \end{bmatrix} + \begin{bmatrix} -4 & 0 \\ -7 & -8 \end{bmatrix} = \begin{bmatrix} -16 & -2 \\ y & 0 \end{bmatrix}\)
35. \(2x \begin{bmatrix} -3 & 4 \\ -11 & 5 \end{bmatrix} = \begin{bmatrix} 12 & -16 \\ y & 20 \end{bmatrix}\)
36. \(\begin{bmatrix} 4 & -3 \\ 8 & -7 \end{bmatrix} + \begin{bmatrix} -5 & x \\ y & 0 \end{bmatrix} = \begin{bmatrix} -1 & -8 \\ 4 & -9 \end{bmatrix}\)

BASEBALL STATISTICS  In Exercises 37 and 38, use the following information about three Major League Baseball teams’ wins and losses in 1998 before and after the All-Star Game. ▶ Source: CNN/SI

Before  The Atlanta Braves had 59 wins and 29 losses, the Seattle Mariners had 37 wins and 51 losses, and the Chicago Cubs had 48 wins and 39 losses.

After  The Atlanta Braves had 47 wins and 27 losses, the Seattle Mariners had 39 wins and 34 losses, and the Chicago Cubs had 42 wins and 34 losses.

37. Use matrices to organize the information.
38. Using your matrices from Exercise 37, write a matrix that shows the total numbers of wins and losses for the three teams in 1998.

HISPANIC MUSIC  In Exercises 39–41, use the following information.

The figures below give the number (in millions) of Hispanic CD, cassette, and music video units shipped to all market channels and the dollar value (in millions) of those shipments (at suggested list prices). ▶ Source: Recording Industry Association of America

1996 Number of units—CDs: 20,779; cassettes: 15,299; and music videos: 45.
Dollar value—CDs: 268,441; cassettes: 122,329; and music videos: 916.

1997 Number of units—CDs: 26,277; cassettes: 17,799; and music videos: 70.
Dollar value—CDs: 344,697; cassettes: 144,645; and music videos: 1,260.

39. Use matrices to organize the information.
40. Write a matrix that gives the total numbers of units shipped and total values for both years.
41. Write a matrix that gives the change in units shipped and dollar value from 1996 to 1997.
42. **COLLEGE COSTS** The matrices below show the average yearly cost (in dollars) of tuition and room and board at colleges in the United States from 1995 through 1997. Use matrix addition to write a matrix showing the totals of these costs.

43. Write an expression in terms of \(V\) and \(M\) that you could use to determine the average total PSAT scores for sophomores and juniors at Central High from 1993 through 1996. Then evaluate the expression.

44. Use the matrix from Exercise 43 to determine the average total PSAT score for juniors at Central High in 1996.

45. The total population in 1991 was 252,177,000 and the projected total population in 2010 is 297,716,000. Rewrite the matrices to give the information as percents of the total population. (Hint: Multiply each matrix by the reciprocal of the total population (in thousands), and then multiply by 100.)

46. Write a matrix that gives the projected change in the percent of the population in each region and age group from 1991 to 2010.

47. Based on the result of Exercise 46, which region(s) and age group(s) are projected to show relative growth from 1991 to 2010?
48. **MULTI-STEP PROBLEM** The matrices show the number of hardcover volumes sold and the average price per volume (in dollars) for different subject areas.

a. Calculate $B - A$. How many more (or fewer) law volumes were sold in 1996 than in 1995? How much more (or less) did the average music book cost in 1996 than in 1995?

b. Calculate $B + A$. Does the “volumes sold” column in $B + A$ give you meaningful information? Does the “average price per volume” column in $B + A$ give you meaningful information? Explain.

c. **Writing** What conclusions can you make about the number of volumes sold and the average price per volume of these books from 1995 to 1996?

**★ Challenge** 49. **GEOMETRY > CONNECTION** A triangle has vertices (2, 2), (8, 2), and (5, 6). Assign a letter to each vertex and organize the triangle’s vertices in a matrix. When you multiply the matrix by 4, what does the “new” triangle look like? How are the two triangles related? Use a graph to help you.

---

**MIXED REVIEW**

**TRANSFORMING FIGURES** Draw the figure produced by each transformation of the figure shown. (Skills Review, p. 921)

50. a 270° counterclockwise rotation about the origin

51. a translation by 2 units right and 4 units down

52. a reflection over the y-axis

**MULTIPLYING REAL NUMBERS** Find the product. (Skills Review, p. 905)

53. $-4(-5)$

54. $8(-2)$

55. $-7(-1)$

56. $\frac{1}{2}(-7)$

57. $\frac{5}{6} \cdot \frac{3}{7}$

58. $3.2(2.4 + 8.1)$

**CHECKING SOLUTIONS** Check whether the ordered pairs are solutions of the inequality. (Review 2.6)

59. $x + 2y \leq -3; (0, 3), (-5, 1)$

60. $5x - y > 2; (-5, 0), (5, 23)$

61. $-8x - 3y < 5; (-1, 1), (3, -9)$

62. $21x - 10y > 4; (2, 3), (-1, 0)$

**FINDING A SOLUTION** Give an ordered pair that is a solution of the system. (Lesson 3.3)

63. $x + y < 10$

64. $x - y \geq 3$

65. $3x > y$

66. $y < 12$

67. $x \leq 15$
